***EXTERIOR APPLICATIONS FOR CONCRETE TILES:** Outdoor installations in freeze-thaw climates may be appropriate if pertinent installation instructions are followed diligently. Installations in these environments are more demanding so the installer must follow all installation instructions closely. If salt is used to melt snow/ice, it is important to note that the salt will eat away at concrete over time (similar to natural stone and poured concrete).

Concrete tiles are not recommended for submerged applications. Installing around the pool, e.g. coping or decking is acceptable.

Concrete tiles are porous, similar to natural stone. If items are properly sealed at install and resealed regularly, thereafter, they will maintain their appearance. Some patina should be expected over time. If resealing is not done consistently, tiles will absorb the environment and show color changes.

For Concrete specific instructions and recommendations refer to the Chapter 19 Outline, Concrete Tile Installation Details, Concrete Tile Floor Installation Recommendations, Concrete Cleaning & Maintenance Tips, and Concrete Sealing Guide on JeffreyCourt.com.
